PROFESSIONAL SUMMARY

Full Stack Developer with strong backend focus in Python (FastAPI) and Node.js. Experience building AI-powered applications, REST APIs, and real-time systems. Skilled in scalable backend design, PostgreSQL, and integrating AI services into production-ready applications. Currently exploring Django for robust backend architectures.

EDUCATION

Bachelor of Technology (B.Tech CSE - AI/ML)

Polaris School of Technology, Bangalore

2025 - 2029

CGPA: 7.6 (Sem 1)

Intermediate (Class XII)

Sandipani Vidyalaya

2025

Grade: 66.46%

Matriculation (Class X)

Maa Jasjeet Jee Vidyalaya

2023

Grade: 84.16%

PROJECTS

Synvex – Next-Gen AI Interview Prep System

[GitHub Link](#)

Tech Stack: React.js, Node.js, Express.js, PostgreSQL, WebSockets, Gemini API, Deepgram API

- Developed a full-stack AI interview simulator with **WebSockets** enabling real-time bidirectional communication for low-latency live voice and text interview sessions.
- Integrated **Deepgram API** for real-time speech-to-text transcription and **Gemini API** for intelligent, context-aware question generation based on candidate responses and role.
- Designed a **PostgreSQL** relational schema to persist interview sessions, question banks, and candidate performance data across users.
- Designed scalable backend services and real-time communication pipelines using WebSockets for low-latency AI-driven interview interactions

TokenGuard – Secure Authentication System

[GitHub Link](#)

Tech Stack: FastAPI, Python, JWT, bcrypt, SQLite

- Built a production-ready authentication microservice using FastAPI with JWT-based auth, secure password hashing (bcrypt), and role-based access control (RBAC).
- Designed clean REST APIs with proper request validation and error handling.
- Designed modular and scalable backend architecture following clean code and service separation principles
- Deployed on Railway with live API endpoints and tested using Postman

FinStack – AI-Powered Personal Finance Ledger

[GitHub Link](#)

Tech Stack: React.js, Node.js, Express.js, MongoDB, Firebase, Gemini API

- Built a full-stack budgeting app with daily transaction logging, dashboard charts for income, expenses, and savings rate.
- Implemented **Firebase** email/password and Google sign-in authentication with server-side token verification.
- Integrated **Gemini API** as an AI finance chat assistant that answers questions from recent transaction data.
- Developed dedicated views for monthly analysis, goals, bills, and shared budgets with a Vite-powered React frontend.

SKILLS

Languages: JavaScript, Python

Frontend: React.js, HTML5, CSS3

Backend: FastAPI, Node.js, Express.js, Django(Basic)

Database: MongoDB, PostgreSQL

Tools: Git, GitHub, Postman, Firebase, Linux, Railway

Concepts: Data Structures & Algorithms (Python), REST APIs, Authentication (JWT), WebSockets, Real-time Systems, Backend Development, Database Design, Cloud Deployment

EXTRA-CURRICULAR ACTIVITIES

- Participating in hackathons, building backend-focused and AI-powered solutions under time constraints and collaborating with teams.
- Solving problems on LeetCode and CodeChef using Python to strengthen algorithmic thinking and backend logic skills.
- Building full-stack and AI-powered projects with focus on backend systems, APIs, and data handling beyond coursework.
- Exploring backend systems, scalable architectures, and emerging technologies to stay updated with industry trends.
